

Protect Your Electronic Consultant Confidential Pricing with User Login & Password Control

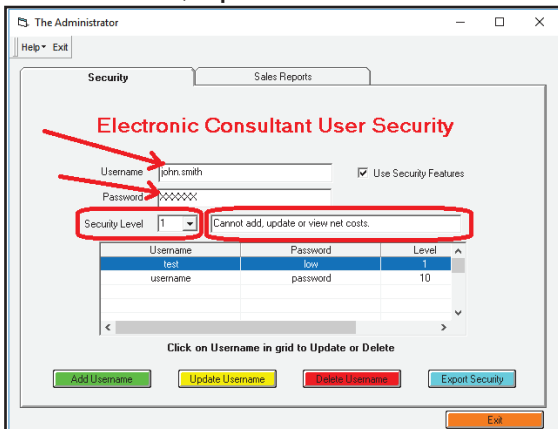

The Administrator was created to give companies and dealers the abilities to password protect their information.

The Administrator lets you set user security levels to one of three different levels, and then requires your staff to login with a username and password you assign

Level 1 - Highest Control

Electronic Consultant User Account cannot add, update or view net costs.

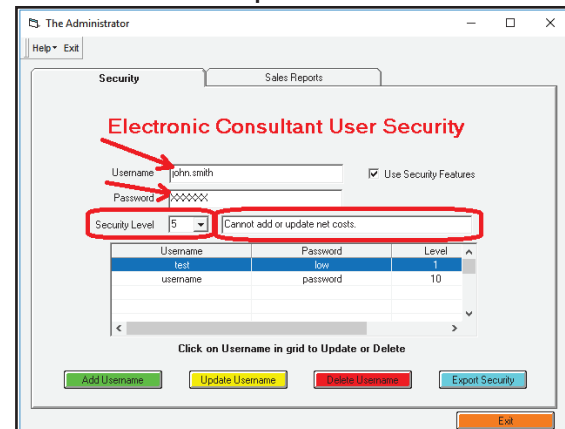

The screenshot shows the 'Security' tab in the Administrator application. The 'Electronic Consultant User Security' section is highlighted with a red box. The 'Security Level' dropdown is set to '1', and the corresponding description is 'Cannot add, update or view net costs.' Below this is a table of users:

Username	Password	Level
test	low	1
username	password	10

Level 5 - Moderate Control

Electronic Consultant User Account cannot add or update net costs.

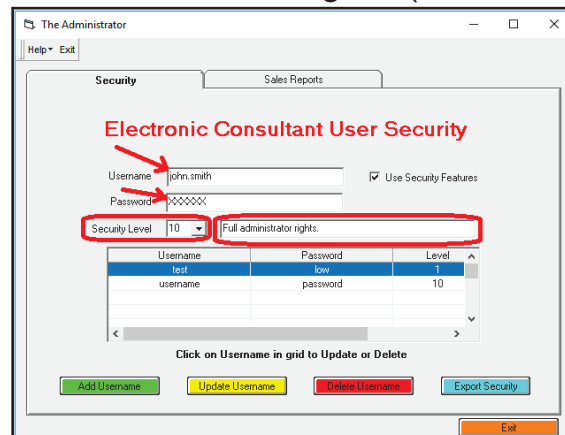

The screenshot shows the 'Security' tab in the Administrator application. The 'Electronic Consultant User Security' section is highlighted with a red box. The 'Security Level' dropdown is set to '5', and the corresponding description is 'Cannot add or update net costs.' Below this is a table of users:

Username	Password	Level
test	low	1
username	password	10

Level 10 - Admin Level

Electronic Consultant User Account Full Administrator Rights. (can do anything)

The screenshot shows the 'Security' tab in the Administrator application. The 'Electronic Consultant User Security' section is highlighted with a red box. The 'Security Level' dropdown is set to '10', and the corresponding description is 'Full administrator rights.' Below this is a table of users:

Username	Password	Level
test	low	1
username	password	10
