

Size and Sell Generators... All in the Palm of your Hand.

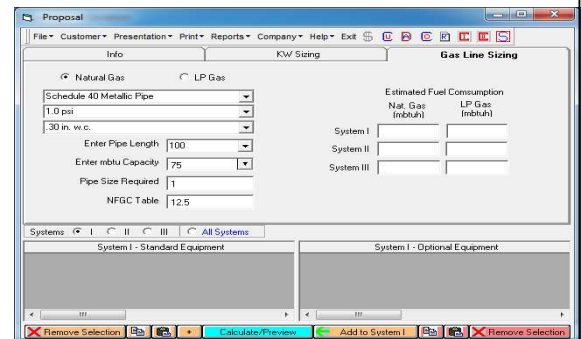

Size the Generator...

Choose from a long list of starting and running kW values and their descriptions to determine what your customer would like to run on their generator. This feature automatically will calculate what size of generator your client will need, and even will auto-calculate a selection factor as well. This grid can be printed as well in a nice report.

Size the Gas Line...

There is no longer a need to look at different charts. With this feature, Adtek has five simple steps lined up for you to size your gas line. Choose your gas and pipe type, your pressure and pressure drop, and your length and capacity and it calculates the pipe size required.

Sell the Generator...

Develop a professional looking proposal, based on your customer's needs in minutes. Print specifications as well as brochures from within the program. Print up to three separate proposals with financing and optional items on each customized system. Create a Company image superior to your competition with our Customizable Presentation screens. Keeping setup time to a minimum, just add your markups and labor rate, then click and print. Install the software on as many computers within your company as needed. Download a demo today and close more sales tomorrow.
